## Tổng Quan

Phân tích chi tiết **TẤT CẢ** các trường hợp cho Manager (quản lý team, assignment, monitoring) và Super Admin (system configuration, business rules, analytics).

### Table of Contents

#### Manager Cases (10)

- M1: View Team Dashboard
- M2: Manual Assignment
- M3: Monitor Workload
- M4: Handle SLA Breach
- M5: Review Escalations
- M6: Manage Team Members
- M7: Generate Reports
- M8: Handle Critical Tickets
- M9: Review Pending Tickets
- M10: Training & KB

#### Super Admin Cases (10)

- A1: System Configuration
- A2: User & Role Management
- A3: Business Rules
- A4: Category & Issue Type
- A5: SLA Policy
- A6: Workflow Management
- A7: Email Templates
- A8: Support Team Structure
- A9: Analytics & Reporting
- A10: System Maintenance

## MANAGER CASES

Team Management, Assignment, Monitoring & Reporting

### M1 View Team Dashboard & Metrics

Description: Manager xem dashboard tổng quan về team performance, ticket statistics, SLA compliance.

#### Key Metrics

- Total Tickets (open, closed, pending)
- SLA Compliance Percentage
- Average Resolution Time
- Team Utilization Rate
- Critical/High Priority Tickets

### M2 Manual Ticket Assignment

Description: Manager manually assign ticket cho tech member khi auto-assignment không match hoặc cần prioritize.

#### Assignment Considerations

- Check tech current workload
- Consider tech skills/specialization
- Review SLA warning tickets
- Balance team workload

### M3 Monitor Team Workload

Description: Manager monitor workload của từng tech member để balance công việc.

#### Workload Indicators

| Indicator       | Green | Yellow | Red  |
|-----------------|-------|--------|------|
| Active Tickets  | < 5   | 5-10   | > 10 |
| SLA Warnings    | 0     | 1-2    | > 2  |
| Pending Tickets | < 3   | 3-5    | > 5  |

### M4 Handle SLA Breach Alerts

CRITICAL: SLA breach requires immediate action. Contact tech, reassign if needed, escalate urgently.

#### Immediate Actions

- Contact Tech: Get status update immediately
- Assess Impact: Critical/High/Medium priority
- Take Action: Reassign, escalate, or provide resources
- Document: Log all actions taken
- Notify: Inform stakeholders

### M5 Review & Approve Escalations

Description: Manager review escalation requests từ L1 to L2 hoặc L2 to L3.

#### Approval Checklist

- Escalation reason is valid and detailed
- Tech has made sufficient resolution attempts
- All troubleshooting steps documented
- Target level has capacity
- Requester has been kept informed

### M6 Manage Team Members

Description: Manager quản lý team members: add/remove, set roles, manage availability.

#### Team Management Actions

- Add Member: Select employee, set role (L1/L2/L3), set skills
- Remove Member: Reassign active tickets first
- Change Role: Update member role and permissions
- Set Availability: Available, On Leave, Busy, Training

### M7 Generate Performance Reports

Description: Manager generate reports về team performance, individual performance, trends.

#### Report Types

- Team Performance: Overall team metrics and KPIs
- Individual Performance: Per-tech statistics
- SLA Compliance: SLA met vs breached
- Trend Analysis: Volume, category, performance trends

### M8 Handle Critical Tickets

CRITICAL: VIP users, system down, security issues require special handling.

#### Critical Ticket Types

- VIP User: Assign to senior tech, frequent updates
- System Down: Create major incident, assemble team
- Security Issue: Alert security team immediately
- Business Critical: Assign to specialist, monitor closely

### M9 Review Pending Tickets

Description: Manager review tất cả pending tickets để ensure không bị stuck.

#### Pending Duration Actions

- < 24h: Acceptable - Monitor only
- 24-48h: Normal - Check tech follow-up
- 48-72h: Urgent - Remind tech or contact requester
- > 72h: Critical - Contact requester directly or close

### M10 Team Training & Knowledge Base

Description: Manager organize training sessions và maintain knowledge base.

#### Training Activities

- Create KB articles for common issues
- Schedule training sessions (new tools, processes)
- Review and update existing KB
- Collect feedback and improve

## SUPER ADMIN CASES

System Configuration, Rules, Analytics & Maintenance

### A1 System Configuration

Description: Super Admin configure system settings: email, notifications, general parameters.

#### Configuration Types

- Email Settings: SMTP host, port, credentials, encryption
- Notification Settings: Email, in-app, SMS, frequency limits
- General Settings: System name, timezone, date format, language
- Security Settings: Password policy, login attempts, session timeout

### A2 User & Role Management

Description: Super Admin manage users và roles trong hệ thống.

#### Role Management

| Role        | Permissions                           | Typical Users               |
|-------------|---------------------------------------|-----------------------------|
| User        | Create tickets, view own tickets      | All employees               |
| Tech L1     | View queue, pick tickets, resolve     | Support staff               |
| Tech L2/L3  | Advanced troubleshooting, escalations | Senior support, specialists |
| Manager     | Team management, assignment, reports  | Team leads                  |
| Super Admin | Full system access, configuration     | System administrators       |

### A3 Business Rules Management

Description: Super Admin create và manage business rules cho auto-assignment, notifications, workflows.

#### Rule Types

- Assignment Rules: Auto-assign based on category, priority, department
- Notification Rules: Send notifications based on events
- Escalation Rules: Auto-escalate based on SLA or conditions
- Priority Rules: Auto-adjust priority based on criteria

### A4 Category & Issue Type Setup

Description: Super Admin setup categories và issue types với tree structure.

#### Tree Structure Example

- Hardware
  - Desktop Issues
  - Laptop Issues
  - Printer Issues
- Software
  - Application Error
  - Installation
  - License
- Network
  - Internet Connection
  - VPN Issues
  - WiFi Problems

### A5 SLA Policy Configuration

Description: Super Admin configure SLA policies cho different priorities.

#### Standard SLA Policies

| Priority | Response Time | Resolution Time | Warning Threshold |
|----------|---------------|-----------------|-------------------|
| Critical | 1 hour        | 4 hours         | 1 hour before     |
| High     | 2 hours       | 8 hours         | 2 hours before    |
| Medium   | 4 hours       | 24 hours        | 4 hours before    |
| Low      | 8 hours       | 72 hours        | 8 hours before    |

### A6 Workflow Management

Description: Super Admin create và manage workflows với states và transitions.

#### Workflow Components

- States: New, Assigned, In Progress, Pending, Resolved, Closed
- Transitions: Rules for moving between states
- Conditions: Role permissions, required fields, validations

### A7 Email Template Configuration

Description: Super Admin create và customize email templates.

#### Email Triggers

- Ticket Created
- Ticket Assigned
- Ticket Resolved
- SLA Warning
- SLA Overdue
- Ticket Escalated
- Ticket Reopened
- Comment Added

### A8 Support Team Structure

Description: Super Admin setup support teams structure (L1, L2, L3).

#### Team Structure

- L1 Teams: First line support, basic troubleshooting
- L2 Teams: Advanced support, specialized knowledge
- L3 Teams: Expert level, complex issues, architecture

### A9 Analytics & Reporting

Description: Super Admin access advanced analytics và system-wide reports.

#### Analytics Types

- System Overview: Total tickets, active users, teams performance
- Performance Analytics: Resolution time, response time, satisfaction
- Trend Analysis: Volume trends, category trends, predictions
- Custom Reports: Build custom reports with dimensions and measures

### A10 System Maintenance & Audit

Description: Super Admin perform system maintenance và audit activities.

#### Maintenance Activities

- Audit Logs: View all system activities and changes
- Database Maintenance: Optimize tables, clean old data, rebuild indexes
- Health Check: Check database, email, storage, APIs, cron jobs
- Backup & Restore: Create backup, restore from backup, schedule auto-backup

#### Summary Comparison

| Role        | Primary Focus        | Key Responsibilities                            | Complexity |
|-------------|----------------------|-------------------------------------------------|------------|
| User        | Create & Track       | Submit tickets, provide info, verify resolution | Low        |
| Tech        | Resolve & Support    | Investigate, provide solutions, escalate        | Medium     |
| Manager     | Monitor & Optimize   | Team management, assignment, performance        | High       |
| Super Admin | Configure & Maintain | System setup, rules, analytics, maintenance     | Very High  |

#### Best Practices

##### For Managers:

- Proactive Monitoring: Check dashboard daily, don't wait for alerts
- Fair Assignment: Balance workload across team members
- Quick Response: Handle SLA breaches and critical tickets immediately
- Team Development: Regular training and knowledge sharing
- Data-Driven Decisions: Use reports and analytics for improvements

##### For Super Admins:

- Documentation: Document all configuration changes
- Testing: Test business rules and workflows before activation
- Backup: Regular system backups and disaster recovery planning
- Security: Regular security audits and access reviews
- Performance: Monitor system performance and optimize
- Change Management: Controlled rollout of system changes
